

## **GREEN PEEL® FACIAL FAQ**

### **DOES HERBAL GREEN PEEL REALLY WORK?**

Yes. The Herbal Green Peel really does work. The peel is effective at treating blemish prone skin, aging skins, sun damage, scars and stretch marks. When you are a good candidate for the peel, follow the post treatment instructions and follow up with the post Green Peel facial, the results are clearly visible after 5 days. I have never performed a Green Peel on a client who did not see the results.

### **HOW CAN THE SKIN PEEL WHEN NO CHEMICAL SUBSTANCES ARE USED?**

The Herbal Green Peel mixture is massaged into the skin. Small herbal particles lightly polish the surface of the skin. This is referred to as epidermal buffing. Active ingredients in the herbal preparation will be absorbed within 48 hours and activate the peeling process.

### **HOW MANY PEELS WILL I NEED?**

I always tell my clients to take it one peel at a time. The skin will continue to improve after the Green Peel treatment so it is very likely one peel will suffice. Most of my clients have not found it necessary to do a series of peels.

### **WHAT WILL THE SKIN LOOK AND FEEL LIKE AFTER THE HERBAL GREEN PEEL TREATMENT?**

After the treatment the skin will be red (similar to a sunburn). There is sometimes a little swelling of the skin, due to the increased circulation. The skin can also have a burning sensation.

## **DOES A HERBAL GREEN PEEL TREATMENT HURT?**

Regardless of your skin type, I would say the Green Peel is intense. It is not intolerable but it is intense. While the herbal mixture is massaged into the skin, the skin becomes increasingly sensitive. The skin becomes warm and I would describe the last minutes of the message as “sand being massaged into a skin that has a sun burn.” Now of course, not all skins will feel it as intensely as I do (my skin can be sensitive) but you definitely feel the massage.

## **HOW LONG WILL THE RESULTS LAST?**

That will depend on you. I do not recommend the Green Peel to anyone who is not committed to basic skin care after the treatment. For those clients who have had the Green Peel and have been consistent with their post skin care, they have all seen their skin continue to improve on the actual results of the peel. I have many clients, for example, who did the Green Peel for their blemish prone skin and now their skin would not be described as blemish prone. I also have many clients who do one Green Peel every year, and the skin they have now is not the skin they had when they did their first Green Peel.

## **WILL IT IMPROVE MY ACNE?**

There are varying degrees of acne. In my opinion, the severe, extreme cases of acne will require medical intervention; anti-biotics, Retin A etc. For these cases I will tell a client their results will be faster and less expensive than doing the Green Peel. But, I rarely see the cases of severe acne. For all the other blemish prone, acne prone skins, the Green Peel will definitely improve the skins condition. I cannot count the number of clients I have treated for their blemish prone skin and now their skin is clear. As hard as that may be to believe, it really is the truth.

## **IS IT ANTI-AGING?**

Yes. The Green Peel will stimulate the collagen production in the skin making the skin firmer. Age spots, associated with an aging skin will improve with the peel. And the regeneration of brand new skin, will also have an anti-aging effect on the skin.

## **WILL I BE SENSITIVE TO SUNLIGHT AFTER THE GREEN PEEL?**

Yes. It is important to use sun protection after you have had a Green Peel treatment. You should be less light sensitive 4 weeks after a peel.

## **CAN I TAKE A SHOWER AND/OR WORKOUT DURING THE 5 DAYS POST PEEL?**

This is another popular Herbal Green Peel FAQ. No. You cannot have ANY water on the skin during the 5 days that you are peeling. You can take a bath, but you cannot have any water on the skin until after you post Green Peel facial.

## **WHY CAN'T I HAVE AN HERBAL GREEN PEEL IF I AM USING RETIN A OR ANTI-BIOTICS?**

Retin A and antibiotics are a contraindication for the Green Peel. Your skin would be far too sensitive to the message of the herbal mixture into the skin. Your skin would be extremely sensitive and have far too much redness, if you were using topical Retin A or antibiotics.
